

Supplementary Table 1. Coefficients resulting from logistic regression analysis on original and imputed data sets

Variable	Coefficient	
	Original data <i>n</i> =261	Pooled imputed data <i>n</i> =290
PRC before saline infusion (mU/L)	-0.262	-0.246
PAC after saline infusion (pmol/L)	0.051	0.049
Potassium supplementation (mmol/day)	0.087	0.063
Plasma potassium concentration (mmol/L)	-3.164	-2.877
<i>Constant</i>	<i>1.753</i>	<i>0.928</i>

Coefficients are unadjusted for the shrinkage factor. PRC, plasma renin concentration; PAC, plasma aldosterone concentration.
